PROFILE

I'm a passionate and results-driven IT professional with over 10 years of experience in mobile application development, focusing on Android Native and Flutter technologies. Currently working as a Solution Architect for one of Indonesia's largest mobile operators, where I design scalable, reliable, and user-centric solutions to support millions of users.

Throughout my career, I've taken on multiple roles—from Web and Java Developer to Android Lead—before moving into architecture. I've successfully led both small and large engineering teams, delivering impactful digital products in software houses, startups, and IT consulting environments.

Always open to collaboration, innovation, and challenges that push boundaries in mobile and cloud-based architectures.
